

## Clean water projects

Most water in the community is from pools like this. The dirty water is open to the air and used by animals and humans

There is no mains water. Water is carried, 20L at a time, usually by girls. This daily trip may be up to 14 miles, so no school for these girls.

The disused well, dug in 2004 but never completed or used.

The finished well and pump, completed May 2010. This is the **ONLY** source of free clean water for about a 30-mile radius.

## Osiligi Charity Projects

Helping Africa help itself
